

Top 10 C Language Interview Questions with Answers

1. Difference between malloc() and calloc()?

malloc allocates one block and leaves memory uninitialized; calloc allocates multiple blocks and initializes memory to zero.

2. Call by value vs call by reference?

Call by value passes a copy; call by reference passes an address, allowing modification.

3. What is a pointer?

A pointer stores the memory address of another variable.

4. Difference between = and ==?

= assigns a value; == compares two values.

5. What is a segmentation fault?

An error caused by accessing invalid memory.

6. What is recursion?

A function calling itself until a base condition is met.

7. while vs do-while?

while checks the condition first; do-while executes at least once.

8. Structure vs Union?

Structures allocate separate memory; unions share the same memory.

9. What are storage classes?

auto, register, static, extern.

10. Compiler vs Interpreter?

Compiler translates the whole program before execution; interpreter translates line by line.
